Project Name: Electricity Consumption Analysis Dashboard using Tableau

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Our team conducted a brainstorming session to identify a meaningful data visualization project. We selected electricity consumption analysis because it helps understand state-wise and region-wise power usage in India. The goal is to build an interactive Tableau dashboard for comparing electricity consumption in 2019 and 2020.

Problem Statement

Develop an interactive Tableau dashboard to analyze electricity consumption across Indian states and regions, enabling users to compare yearly consumption, identify high and low consumption areas, and support data-driven decisions.

Objectives

- Analyze electricity consumption across Indian states.
- Compare electricity usage between 2019 and 2020.
- Visualize region-wise consumption.
- Identify highest and lowest consuming states.
- Embed Tableau dashboard using Flask.

Step 2: Brainstorm, Idea Listing and Grouping

Idea	Description	Priority	Status
1	India Map Visualization	High	Selected
2	2019 vs 2020 Comparison	High	Selected
3	Region-wise Pie Charts	High	Selected
4	State-wise Bar Chart	High	Selected
5	Region Filters	High	Selected
6	Flask Integration	High	Selected
7	Prediction Model	Medium	Future Work

Idea Grouping

Data Analysis: State-wise, Region-wise, Year-wise

Visualization: Maps, Pie Charts, Bar Charts, Filters

Web Development: Tableau + Flask

Future Enhancements: Machine Learning, Real-time Data

Expected Outcome

The dashboard enables users to compare electricity consumption, analyze regional trends, identify high and low consuming states, and make informed decisions using interactive visualizations.
