

Project Performance Test

Date	04 - 07 - 2026
Team ID	SWUID2026200518
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The Tableau dashboard successfully renders electricity consumption data for all regions (ER, NER, NR, SR, and WR). The data is visualized using maps, bar charts, pie charts, and yearly/monthly comparison graphs. Dashboard loading and rendering are smooth without noticeable delays.
2.	Data Preprocessing	Data processing involved removing duplicate records, handling missing values, formatting date fields, converting usage values into numerical format, grouping states into regions, and validating electricity consumption data for 2019 and 2020 before importing into Tableau.
3.	Utilization of Filters	Interactive filters were implemented for Year (2019 & 2020) , Region , State , and Usage . These filters allow users to dynamically analyze electricity consumption across different years and regions.
4.	Calculation fields Used	Calculated fields include SUM(Usage) , Year-wise Consumption, Region-wise Total Consumption, Percentage Contribution by Region, Monthly Consumption, and Quarter-wise Consumption Analysis.
5.	Dashboard design	No of Visualizations / Graphs - 8 • Region-wise Usage Bar Chart • Total Region Consumption Pie Chart • 2019 Electricity Consumption Map • 2020 Electricity Consumption Map • Year-wise Regional Consumption Chart • Total State Consumption Chart • Monthly Consumption Charts (2019 & 2020) • Quarter-wise Usage Analysis
6	Story Design	No of Visualizations / Graphs - 8 The Tableau Story presents the dashboard in a logical sequence, beginning with yearly electricity consumption, followed by region-wise comparison, state-wise analysis, monthly trends, quarter-wise usage, and interactive dashboard insights.
